DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on December 14, 2006 has been entered.

Claim Objections

Claim 16 is objected to because of the following informalities: the phrase "the side wall box" appears at the end of line 6 of the amended claim. It appears some verbiage has been omitted in this line. Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 2, 4, 12 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Humber (6,129,109) in view of Condon et al (5,653,254) (Condon).

1. Regarding claim 1, Humber discloses a flush-mounting box with an open front, an edge, sidewalls, a base (Figures 1- 4) and a flange (42). The device has plural means on the box (48) for fastening the flange and the flange can be fastened a

variable distance form the front edge (column 2, lines 15-22). Plumbing elements can be installed within the box through openings (fittings) in the sidewalls (Figure 4).

Humber does not teach protruding eyes extending from the sidewalls adjacent to the base. Condon discloses a flush-mounting box with attachment means around the front opening and eyes extending from the sidewalls adjacent to the base for additional mounting rigidity (39a, 39b, Figures 3, 6 and 9, column 3, lines 48-53). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have incorporated the use of eyes extending from the sidewalls adjacent to the base as disclosed by Condon in the box disclosed by Humber to provide means for additional mounting rigidity.

- 2. Regarding claim 2, Humber discloses the flange is a solid ring (Figure 1).
- 3. Regarding claims 4 and 12, Humber discloses the flange is fastened directly to the box from the open front of the box.
- 4. Regarding claim 15, Humber discloses the flange may be latched into position. (column 2,lines 15-22).
- 5. Claims 1-4, 10 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bossert, of record, in view of Condon.
- 6. Regarding claim 1, Bossert discloses a flush-mounted box with an open front (Figures 4 and 5), an edge (y), and a flange (a) on an outside of the box. The box has plural means (m) for fastening the flange to the box at variable distance back from the edge (page 1, lines 79-94). Plumbing elements can be installed within the box through openings (fittings) in the device created by removing typical knock-outs.

Bossert does not teach protruding eyes extending from the sidewalls adjacent to the base. Condon discloses a flush-mounting box with attachment means around the front opening and eyes extending from the sidewalls adjacent to the base for additional mounting rigidity (39a, 39b, Figures 3, 6 and 9, column 3, lines 48-53). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have incorporated the use of eyes extending from the sidewalls adjacent to the base as disclosed by Condon in the box disclosed by Bossert to provide means for additional mounting rigidity.

- 7. Regarding claim 2, the flange is a solid ring (Figure 1).
- 8. Regarding claim 3, the device has a plurality of structures spaced back from the edge at the open front on the outer surface of the sidewall for fastening the flange.
- 9. Regarding claim 4, the flange is fastened directly to the box.
- 10. Regarding claim 10, the joint between the box and the flange is a bayonet joint.
- 11. Regarding claim 16, Bossert discloses a flush mounting box that has an open front at edge (y), a plurality of grooves on the outside of the sidewalls of the box (m) at different distances from the edge and a flange (a) with inward protrusions (e) that engage the grooves.
- 12. Claims 1, 3, 4 and 7-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ullman, of record, in view of Condon.
- 13. Regarding claim 1, Ullman discloses a flush-mounting box (12, Figures 1 and 2) having an open front edge, sidewalls (40), a flange (20) and plural means (44) on the box for fastening the flange at a variable distance from the edge. Plumbing elements

Application/Control Number: 10/620,123 Page 5

Art Unit: 3781

can be installed within the box through openings in the device created by removing typical knock-outs (47).

Ullman does not teach protruding eyes extending from the sidewalls adjacent to the base. Condon discloses a flush-mounting box with attachment means around the front opening and eyes extending from the sidewalls adjacent to the base for additional mounting rigidity (39a, 39b, Figures 3, 6 and 9, column 3, lines 48-53). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have incorporated the use of eyes extending from the sidewalls adjacent to the base as disclosed by Condon in the box disclosed by Ullman to provide means for additional mounting rigidity.

- 14. Regarding claim 3, the device has a plurality of structures spaced back from the edge at the open front on the outer surface of the sidewall for fastening the flange (column 5, lines 55-69).
- 15. Regarding claim 4, the flange is fastened directly to the box.
- 16. Regarding claim 7, the flange and the sidewall are engaged at ribs (44) having 0 degrees pitch angle on the flat side.
- 17. Regarding claims 8 and 9 the ribs are interrupted down to the root of the ribs.

Allowable Subject Matter

18. Claims 17 and 18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

19. Applicant's arguments with respect to claims 1-4, 1-10, 12, 15 and 16 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Harry A. Grosso whose telephone number is 571-272-4539. The examiner can normally be reached on Monday through Thursday from 7am to 4 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anthony Stashick can be reached on 571-272-4561. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
